

## USPACOM

### SOLE SOURCE JUSTIFICATION

(Reference: FAR Part 8.405-6)

#### 1. ADMINISTRATIVE INFORMATION.

J-CODE: J732 TECHNICAL POC: Jerry Giles

Ph#: 808-472-7732

2. Federal Supply Schedule or Vendor Source Considered (include complete vendor address:

3. Description of the Supply or Service to be purchased:

USPACOM (APAN) currently employs Cafesoft CAM's as a secure, flexible and affordable web single sign-on and access management security software that protects static documents and dynamic JSP/servlet, ASP, ASP.Net, PHP, Cold Fusion and CGI web applications. Cams offers all the power of an enterprise web single sign-on security solution in a simple, flexible product for sites: 1) On public or private networks; 2) With a single web server or a farm of web and J2EE application servers; or, 3) With user accounts in LDAP servers, Active Directory or SQL databases.

Cafesoft CAMS software is currently in use on the USPACOM unclassified information sharing and collaboration platform. USPACOM APAN software programmers has already wrote extensive customized software code using the Cafesoft CAMS software and is fully interoperable with and dependent on other software programs on APAN.

- 1) Maintain & scale USPACOM's existing integrated software collaborative solution using single-sign on software
- 2) Continue to leverage USPACOM's unique Cafesoft CAM software code that was written to be fully interoperable with and dependent on Telligent Community software to meet mission essential operational requirements
- 3) Expand to meet the USPACOM enterprise collaborative environment and meet the demand of the growing user base and growing capacity requirements

4. Estimated value:

5. If restricting source selection of schedule contractors, provide justification of the proposed contractor's **unique qualifications** to provide the required supply or service. See FAR 8.405-6(a) and (b) for more info. Select **One** of the following..

**Unique or Specialized:** USPACOM's current collaborative environment – supported by Cafesoft CAM's security single sign-on software -- *is already deployed and in use supporting current USPACOM operational requirements.* The Cafesoft CAM's software has been customized and extended to meet operational requirements and integrate with other proprietary USPACOM unclassified information sharing services, and has already been adopted and is actively being used operationally to support PACOM as well as SOUTHCOM, AFRICOM & EUCOM. Therefore, USPACOM requires Cafesoft CAM's software to meet the planned expansion of this existing collaborative environment be procured and deployed to maintain continuity of service and user experience, and build upon already completed unique software code, customization, and integration. No software other than Cafesoft CAM's will be interoperable in USPACOM's APAN collaborative environment, or will support the customized collaborative services.

6. Provide a description of the market research conducted among scheduled holders and the results of the research. If research was not completed, provide a statement reasoning why.

USPACOM's APAN technical staff conducted limited software market research by completing a Google search, contacting software vendors, and reviewing current computer science and information technology journals. However, since the software in question, Cafesoft CAM's, is the current software that is in use on APAN and has been adapted to the USPACOM unclassified information sharing environment, we had to go with Cafesoft. In addition the Cafesoft CAM's software is fully interoperable with the customized software code written and currently employed by USPACOM to create APAN's unique collaborative environment that delivers customized information sharing / exchange services.

7. Provide any other facts supporting the justification

Due to the unique nature of USPACOM's unclassified non-military-network information sharing and collaboration network, APAN interacts with many "non-traditional" partners within the Pacific Area of Operations (AOR). APAN has been a major contributor to the Commander's Security Cooperation Program and relies upon APAN software to communicate and collaborate with its coalition partners and multinational agencies. In addition the Telligent Software that APAN employs is used in direct support of humanitarian assistance / disaster response (HA/DR) response operations. Due to APAN's growing role in HA/DR response operations, the Cafesoft CAM's Software already employed and customized on APAN needs to expand to meet USPACOM customer's needs.

8. Provide a statement for future actions, if any, the directorate may take to remove or overcome any barriers that led to the restricted consideration of brand name or source

selection before any subsequent acquisitions for the supplies or services are made. Or state that "Future Requirements for this service/supply will be competed".

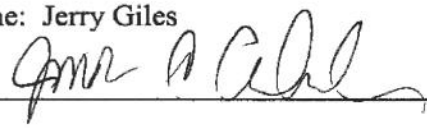

USPACOM's APAN technical staff will make every effort possible to overcome any barriers that restrict future competition for services / supplies.

#### 9. CERTIFICATION.

I certify that the facts and representations under my cognizance which are included in this Limited Source Justification are complete and accurate

Technical Cognizance:

Printed Name: Jerry Giles

Signature: 

Title: APAN Branch Chief

Date: 04 June 2010

I certify that this Limited Source Justification is accurate and complete to the best of my knowledge and understanding.
